## — ROOTED CUTTINGS —

Rooted cuttings are an economical and quite satisfactory way of building up your stock. First your initial cost is low and if ordinary good nursery practices are followed a satisfactory crop will result. For best results we urge they be planted where water is readily available and under some kind of partial shade for the first year. We usually ship during May but if cuttings are not quite ready for successful transplanting they will not be shipped until ready regardless of season. Some cuttings listed below may be shipped at once, they were rooted last winter and heeled-in outside for a year.
